### UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGION 5

77 WEST JACKSON BOULEVARD CHICAGO, IL 60604-3590

William D. Jarosz

REPLY TO THE ATTENTION OF

S-6J

President The Fansteel Corporation One Tantalum Place North Chicago, Illinois 60064

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Re:

Fansteel, Inc.; Operable Unit #2

Vulcan Louisville Smelting Company Site ILD#097271563; Site Spill ID# B5H7

Dear Mr. Jarosz:

Enclosed please find a unilateral Administrative Order issued by the U.S. Environmental Protection Agency (U.S. EPA) under Section 106 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986 (CERCLA), 42 U.S.C. §9601, et seq.

Please note that the Order allows an opportunity for a conference if requested within three (3) business days after issuance of the Order, or if no conference is requested, an opportunity to submit comments within seven (7) business days of issuance of the Order.

If you have any questions regarding the Order, feel free to contact Tom Krueger, Assistant Regional Counsel, at (312) 886-0562 or John O'Grady, Remedial Project Manager, at (312) 886-1477.

Singerely yours,

William E. Muno, Director

Superfund Division

Enclosure

cc: Peter Sorensen, Illinois EPA

E. Jonathan Jackson, Mgr, Environmental Affairs

Michael J. Mocniak, Vice President, General Counsel, and Secretary

# UNITED STATES ENVIRONMENTAL PROTECTION AGENCY Region 5

IN THE MATTER OF:

) Docket No.

FANSTEEL, INC.

) ADMINISTRATIVE ORDER

) PURSUANT TO SECTION 106(a)

OF THE COMPREHENSIVE

ENVIRONMENTAL RESPONSE,

COMPENSATION, AND

LIABILITY ACT OF 1980,

AS AMENDED, 42 U.S.C.

\$9606(a)

#### I. JURISDICTION AND GENERAL PROVISIONS

This Order is issued pursuant to the authority vested in the President of the Companies of the Carcla"), 42 U.S.C. §9606(a), and delegated to the Administrator of the United States Environmental Protection Agency ("U.S. EPA") by Executive Order No. 12580, January 23, 1987, 52 Federal Register 2923, and further delegated to the Regional Administrators by U.S. EPA Delegation Nos. 14-14-A and 14-14-B, and to the Director, Superfund Division, Region 5, by Regional Delegation Nos. 14-14-A and 14-14-B.

This Order pertains to property located at One Tantalum Place, North Chicago, Illinois, which is a portion of the Vacant Lot Site and/or appears to be contributing to contamination at the Vacant Lot Site (the "Vacant Lot Site" or the "Site"). This Order requires the Respondent to conduct removal activities described herein to abate an imminent and substantial endangerment to the public health, welfare or the environment that may be presented by the actual or threatened release of hazardous substances at or from the Site.

U.S. EPA has notified the State of Illinois of this action pursuant to Section 106(a) of CERCLA, 42 U.S.C. §9606(a).

#### II. PARTIES BOUND

This Order applies to and is binding upon Respondent and Respondent's receivers, trustees, successors and assigns. Any change in ownership or corporate status of Respondent including, but not limited to, any transfer of assets or real or personal property shall not alter such Respondent's responsibilities under this Order.

Respondent shall ensure that its contractors, subcontractors, and representatives comply with this Order. Respondent shall be responsible for any noncompliance.

#### III. PINDINGS OF FACT

Based on available information, including the Administrative Record in this matter, U.S. EPA hereby finds that:

- 1. The Vacant Lot Site, as initially defined, was a 6.4-acreparcel located in North Chicago, Lake County, Illinois. This parcel is bordered on the north by elevated tracks of Elgin, Joliet & Eastern Railroad, on the east by Fansteel, on the south by Martin Luther King Drive and on the west by Commonwealth Avenue. The Site is depicted in Attachment B.
- 2. The Site posed easy access through its unfenced west boundary and mortheast conjugate the Site, as well as through gaps in the existing fences. The site and make of gravel or baddy weathered concrete a special property of the south end of the Site and proceeded north through approximately three-fourths of the Site length. The southern two-chirds of the Site had a weathered concrete/gravel layer, under approximately 6 inches of top soil. Several areas of the northwest one-third portion of the Site had deposite of slag, ash, and cinders.
- 3. The Site is transected by Pettibone Creek, an intermittent water body that lies in a relatively steep-sided ravine, and originates at the northwest boundary of the Site. The Creek flows to the south on Site, and then flows east to finally merge into Lake Michigan (approximately 1.5 miles from the Site). The Creek, at its origin, receives water through the North Chicago Stormwater discharge and a ditch. The Creek is also fed by rain water and outfalls from two nearby facilities (EMCO and Fansteel). As such, the Creek, within the Site premises, contains water only during rain, Stormwater, or industrial discharge events.
- 4. People reportedly used the Site as a throughway since it is located in an area of businesses and nearby residences. There was evidence (trash) that the Site was being used by nearby residents to visit the creek area. A local authority also stated that the Site was sometimes inhabited by homeless people.
- 5. U.S. EPA conducted an Engineering Evaluation/Cost Analysis ("EE/CA") for the 6.4 acre parcel at the Site. The EE/CA Report identified contamination at levels of concern, including: elevated concentrations of lead in soil (>1,400 milligrams per kilogram ("mg/kg")) at depths up to 2 feet across the entire area; a primary source area with soils contaminated with tetrachloroethene (PERC) to a 4-foot depth (at levels up to 170 mg/kg) and lead contamination to a 9-foot depth (1,700 mg/kg); an

area where soils were contaminated with polychlorinated biphenyls (PCBs) at levels greater than 50 mg/kg to a 9-foot depth; lead and copper above the "severe effects level" (at levels up to 1,550 mg/kg and 3,100 mg/kg, respectively) and benzo(a)pyrene contamination (at levels up to 13 mg/kg) in sediments throughout the entire creekbed, to depths ranging from 2 to 6 feet;

- 6. On May 6, 1998, U.S. EPA issued an Action Memorandum selecting the following response activities: securing the Site and excavating and disposing of contaminated soils in excess of removal cleanup standards. The Action Memorandum was revised on September 15, 1998, to include excavation and disposal of contaminated sediments in Pettibone Creek. Removal action objectives were developed for those areas of the Site which were determined to exceed a risk of 1 x 10-5, a Hazard Index of 1, or for those areas which have a high potential to release contaminants to the environment.
- 7. PA completed these response activities in May, 1999. U.a. Party Representation of approximately 45,000 tons of contracted scale and sediment.
- 8. The EE/CA all and identified several different and distinctive groundwater-contaminated areas on the Site. Groundwater in the northern one-third area of the Site was contaminated with manganese, 1,2 DCE, and TCE. TCE concentrations are above Removal Action Levels established in the EE/CA Report, and 1,1-dichlorethene concentrations above Maximum Contaminant Limits (MCLs) were detected in the north and northeastern perimeter Geoprobe water samples.
- 9. Because TCE was not detected in soils on the northern portion of the 6.4 acre parcel, the EE/CA Report concluded that the TCE contamination originated from an adjacent parcel. Because ground water flows in a westerly direction, the EE/CA Report concluded that the TCE contamination originated on Fansteel's property. RCRA closure records for Fansteel's property indicate waste management and disposal occurred in this vicinity and that in a tank area soil contamination extended to a depth of up to 20 feet.
- 10. The EE/CA report and the Action Memorandum determined that groundwater response activities at the Site should be deferred until the TCE source area was investigated further.
- 11. The EE/CA Report concluded that releases from the TCE source area had become commingled and connected with other releases at the Site. As a result, the Action Memorandum concluded that further information concerning the nature and extent of groundwater contamination and source(s) to the east of the 6.4 acre parcel would need to be developed before appropriate Sitewide alternatives for groundwater remediation could be evaluated.

- 12. Under CERCLA, the definition of "facility" expands to encompass the extent of the releases of concern.
- 13. On June 17, 1997, U.S. EPA issued a notice letter to Fansteel, Inc. requesting that it conduct an EE/CA to further investigate the nature and extent of sediment and groundwater contamination on its property adjacent to the area addressed in the first EE/CA at the Site.

#### IV. CONCLUSIONS OF LAW AND DETERMINATIONS

Based on the Findings of Fact set forth above, and the Administrative Record supporting these removal actions, U.S. EPA determines that:

- 1. The Vacant Lot Site is a "facility" as defined by Section 101(9) of CERCLA, 42 U.S.C. §9601(9).
- 2. TCE and manganese are "hazardous substances" as defined by Section 101(14) of CERCLA, 42 U.S.C. §9601(14).
- 3. Respondent is a "person" as defined by Section 101(21) of CERCLA, 42 U.S.C. §9601(21).
- 4. Respondent Fansteel Corporation is the present "owner" and "operator" of a portion of the Vacant Lot Site, as defined by Section 101(20) of CERCLA, 42 U.S.C. §9601(20). Respondent is therefore a liable person under Section 107(a) of CERCLA, 42 U.S.C. §9607(a).
- 5. The conditions described in the Findings of Fact above constitute an actual or threatened "release" into the "environment" as defined by Sections 101(8) and (22) of CERCLA, 42 U.S.C. §§9601(8) and (22).
- 6. The conditions present at the Site constitute a threat to public health, welfare, or the environment based upon the factors set forth in Section 300.415(b)(2) of the National Oil and Hazardous Substances Pollution Contingency Plan, as amended ("NCP"), 40 CFR Part 300. These factors include, but are not limited to, the following:
  - a. Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances, pollutants or contaminants; this factor is present at the Site due to the existence of historic disposal areas which provide likely sources for the groundwater contamination detected on the eastern end of the Site area investigated in the EE/CA report.
  - b. Actual or potential contamination of drinking water supplies or sensitive ecosystems; this factor is present at

the Site due to the presence of hazardous substances, including manganese and TCE, in groundwater. Although there are no known groundwater receptors in the Site vicinity, the groundwater may cause actual or potential contamination via groundwater migration and surface water runoff into the Creek which feeds into Lake Michigan (~1.5 miles from the Site).

- c. High levels of hazardous substances or pollutants or contaminants in soils largely at or near the surface, that may migrate; this factor is present at the Site due to the existence of high levels of VOCs in the Site soils from the surface extending below ground to approximately 20 feet.
- 7. The actual or threatened release of hazardous substances from the Site may present an imminent and substantial endangerment to the public health, welfare, or the environment within the meaning of Section 106(a) of CERCLA, 42 U.S.C. §9606(a).
- 8. The removal actions required by this Order are necessary to protect the public health, welfare, or the environment, and are not inconsistent with the NCP and CERCLA.

#### V. ORDER

Based upon the foregoing Findings of Fact, Conclusions of Law, Determinations, and the Administrative Record for this Site, U.S. EPA hereby orders that Respondent perform the following actions:

#### 1. Notice of Intent to Comply

Respondent shall notify U.S. EPA in writing within 3 business days after the effective date of this Order of Respondent's irrevocable intent to comply with this Order. Failure of Respondent to provide such notification within this time period shall be a violation of this Order.

#### 2. <u>Designation of Contractor, Project Coordinator, and On-Scene</u> Coordinator

Respondent shall perform the removal actions itself or retain a contractor or contractors to implement the removal actions. Respondent shall notify U.S. EPA of Respondent's qualifications or the name and qualifications of such contractor(s), whichever is applicable, within 5 business days of the effective date of this Order. Respondent shall also notify U.S. EPA of the name and qualifications of any other contractors or subcontractors retained to perform work under this Order at least 5 business days prior to commencement of such work. U.S. EPA retains the right to disapprove of the Respondent or any of the contractors and/or subcontractors retained by the Respondent. If U.S. EPA disapproves a selected contractor, Respondent shall retain a

different contractor within 2 business days following U.S. EPA's disapproval and shall notify U.S. EPA of that contractor's name and qualifications within 3 business days of U.S. EPA's disapproval.

Within 5 business days after the effective date of this Order, the Respondent shall designate a Project Coordinator who shall be responsible for administration of all the Respondent's actions required by the Order and submit the designated coordinator's name, address, telephone number, and qualifications to U.S. EPA. To the greatest extent possible, the Project Coordinator shall be present on-site or readily available during site work. U.S. EPA retains the right to disapprove of any Project Coordinator named If U.S. EPA disapproves a selected Project by the Respondent. Coordinator, Respondent shall retain a different Project Coordinator within 3 business days following U.S. EPA's disapproval and shall notify U.S. EPA of that person's name and qualifications within 4 business days of U.S. EPA's disapproval. Receipt by Respondent's Project Coordinator of any notice or communication from U.S. EPA relating to this Order shall constitute receipt by Respondent.

The U.S. EPA has designated John O'Grady of the Remedial Response Branch, Region 5, as its On-Scene Coordinator ("OSC"). Respondent shall direct all submissions required by this Order to the OSC at 77 West Jackson Boulevard, (SR-6J), Chicago, Illinois 60604-3590, by certified or express mail. Respondent shall also send a copy of all submissions to Thomas Krueger, Assistant Regional Counsel, 77 West Jackson Boulevard, C-14J, Chicago, Illinois, 60604-3590. Respondent is encouraged to make its submissions to U.S. EPA on recycled paper (which includes significant post-consumer waste paper content where possible) and using two-sided copies.

#### 3. Work to Be Performed

Respondent shall, at a minimum, perform an investigation and develop and submit to U.S. EPA an EE/CA Report in accordance with the attached Workplan. This Workplan is incorporated into and made an enforceable part of this Order.

The EE/CA Report shall be consistent with, at a minimum, U.S. EPA guidance entitled, "Guidance on Conducting Non-Time Critical Removal Actions Under CERCLA", EPA/540-R-93-057, Publication 9360.32, PB 93-963402, dated August 1993.

#### 3.1 <u>EE/CA Report</u>

Within 180 calendar days after the effective date of this Order, the Respondent shall submit to U.S. EPA for approval a draft EE/CA Report that is consistent with this Order and the Workplan.

U.S. EPA may approve, disapprove, require revisions to, or modify the draft EE/CA Report. If U.S. EPA requires revisions,

1

Respondent shall submit a revised EE/CA Report incorporating all of U.S. EPA's required revisions within 20 business days of receipt of U.S. EPA's notification of the required revisions.

In the event of U.S. EPA disapproval of the revised EE/CA Report, Respondent may be deemed in violation of this Order. In such event, U.S. EPA retains the right to terminate this Order, conduct a complete EE/CA, and obtain reimbursement for costs incurred in conducting the EE/CA from the Respondent.

The revised report shall also include the following certification signed by a person who supervised or directed the preparation of that report:

Under penalty of law, I certify that, to the best of my knowledge, after appropriate inquiries of all relevant persons involved in the preparation of this EE/CA Report, the information submitted is true, accurate, and complete.

Respondent shall not commence or undertake any removal actions at the Site without prior U.S. EPA approval. Respondent shall notify U.S. EPA at least 48 hours prior to performing any on-site work pursuant to the Workplan.

#### 3.2 Quality Assurance and Sampling

All sampling and analyses performed pursuant to this Order shall conform to U.S. EPA direction, approval, and guidance regarding sampling, quality assurance/quality control ("QA/QC"), data validation, and chain of custody procedures. Respondent shall ensure that the laboratory used to perform the analyses participates in a QA/QC program that complies with U.S. EPA guidance. Upon request by U.S. EPA, Respondent shall have such a laboratory analyze samples submitted by U.S. EPA for quality assurance monitoring. Respondent shall provide to U.S. EPA the quality assurance/quality control procedures followed by all sampling teams and laboratories performing data collection and/or analysis. Respondent shall also ensure provision of analytical tracking information consistent with OSWER Directive No. 9240.0-2B, "Extending the Tracking of Analytical Services to PRP-Lead Superfund Sites."

Upon request by U.S. EPA, Respondent shall allow U.S. EPA or its authorized representatives to take split and/or duplicate samples of any samples collected by Respondent or its contractors or agents while performing work under this Order. Respondent shall notify U.S. EPA not less than 3 business days in advance of any sample collection activity. U.S. EPA shall have the right to take any additional samples that it deems necessary.

#### 3.3 Reporting

Respondent shall submit a monthly written progress report to U.S. EPA concerning activities undertaken pursuant to this Order,

beginning 30 calendar days after the effective date of this Order, until termination of this Order, unless otherwise directed by the OSC. These reports shall describe all significant developments during the preceding period, including the work performed and any problems encountered, analytical data received during the reporting period, and developments anticipated during the next reporting period, including a schedule of work to be performed, anticipated problems, and planned resolutions of past or anticipated problems.

Respondent, and any successor in title shall, at least 30 days prior to the conveyance of any interest in real property at the Site, give written notice of this Order to the transferee and written notice of the proposed conveyance to U.S. EPA and the State. The notice to U.S. EPA and the State shall include the name and address of the transferee. The party conveying such an interest shall require that the transferee will provide access as described in Section V.4 (Access to Property and Information).

#### 3.4 Additional Work

In the event that the U.S. EPA or the Respondent determine that additional work, including EE/CA support sampling and/or an engineering evaluation, is necessary to accomplish the objectives of the EE/CA Report, notification of such additional work shall be provided to the other party in writing. Any additional work which Respondent determines to be necessary shall be subject to U.S. EPA's written approval prior to commencement of the additional work. Respondent shall complete, in accordance with standards, specifications, and schedules U.S. EPA has approved, any additional work Respondent has proposed, and which U.S. EPA has approved in writing or that U.S. EPA has determined to be necessary, and has provided written notice of pursuant to this paragraph.

#### 4. Access to Property and Information

Respondent shall provide or obtain access as necessary to the Site and all appropriate off-site areas, and shall provide access to all records and documentation related to the conditions at the Site and the activities conducted pursuant to this Order. Such access shall be provided to U.S. EPA employees, contractors, agents, consultants, designees, representatives, and State of Illinois representatives. These individuals shall be permitted to move freely at the Site and appropriate off-site areas in order to conduct activities which U.S. EPA determines to be necessary. Respondent shall submit to U.S. EPA, upon request, the results of all sampling or tests and all other data generated by Respondent or its contractor(s), or on the Respondent's behalf during implementation of this Order.

Where work under this Order is to be performed in areas owned by or in possession of someone other than Respondent, Respondent shall obtain all necessary access agreements within 14 calendar

days after the effective date of this Order, or as otherwise specified in writing by the OSC. Respondent shall immediately notify U.S. EPA if, after using its best efforts, it is unable to obtain such agreements. Respondent shall describe in writing its efforts to obtain access. U.S. EPA may then assist Respondent in gaining access, to the extent necessary to effectuate the response activities described herein, using such means as U.S. EPA deems appropriate.

#### 5. Record Retention, Documentation, Availability of Information

Respondent shall preserve all documents and information, in its possession or the possession of its contractors, subcontractors or representatives, relating to work performed under this Order, or relating to the hazardous substances found on or released from the Site, for six years following completion of the removal actions required by this Order. At the end of this six year period and at least 60 days before any document or information is destroyed, Respondent shall notify U.S. EPA that such documents and information are available to U.S. EPA for inspection, and upon request, shall provide the originals or copies of such documents and information to U.S. EPA. In addition, Respondent shall provide documents and information retained under this Section at any time before expiration of the six year period at the written request of U.S. EPA. Any information that Respondent is required to provide or maintain pursuant to this Order is not subject to the Paperwork Reduction Act of 1995, 44 U.S.C. §3501 et seq.

#### 6. <u>Off-Site Shipments</u>

All hazardous substances, pollutants or contaminants removed offsite pursuant to this Order for treatment, storage or disposal shall be treated, stored, or disposed of at a facility in compliance, as determined by U.S. EPA, with the U.S. EPA Off-Site Rule, 40 CFR §300.440, 58 Fed. Reg. 49215 (Sept. 22, 1993).

#### 7. Compliance With Other Laws

All actions required pursuant to this Order shall be performed in accordance with all applicable local, state, and federal laws and regulations except as provided in Section 121(e) of CERCLA and 40 CFR §300.415(j). In accordance with 40 CFR §300.415(j), all onsite actions required pursuant to this Order shall, to the extent practicable, as determined by U.S. EPA, considering the exigencies of the situation, attain applicable or relevant and appropriate requirements under federal environmental or state environmental or facility siting laws.

#### 8. <u>Emergency Response and Notification of Releases</u>

If any incident, or change in Site conditions, during the activities conducted pursuant to this Order causes or threatens to cause an additional release of hazardous substances from the

Site or an endangerment to the public health, welfare, or the environment, the Respondent shall immediately take all appropriate action to prevent, abate or minimize such release, or endangerment caused or threatened by the release. Respondent shall also immediately notify the OSC or, in the event of his/her unavailability, shall notify the Regional Duty Officer, Emergency Response Branch, Region 5 at (312) 353-2318, of the incident or Site conditions.

Respondent shall submit a written report to U.S. EPA within 7 business days after each release, setting forth the events that occurred and the measures taken or to be taken to mitigate any release or endangerment caused or threatened by the release and to prevent the reoccurrence of such a release. Respondent shall also comply with any other notification requirements, including those in Section 103 of CERCLA, 42 U.S.C. §9603, and Section 304 of the Emergency Planning and Community Right-To-Know Act, 42 U.S.C. §11004.

#### VI. AUTHORITY OF THE U.S. EPA ON-SCHNE COORDINATOR

The OSC shall be responsible for overseeing the implementation of this Order. The OSC shall have the authority vested in an OSC by the NCP, including the authority to halt, conduct, or direct any work required by this Order, or to direct any other response action undertaken by U.S. EPA or Respondent at the Site. Absence of the OSC from the Site shall not be cause for stoppage of work unless specifically directed by the OSC.

U.S. EPA and Respondent shall have the right to change their designated OSC or Project Coordinator. U.S. EPA shall notify the Respondent, and Respondent shall notify U.S. EPA, as early as possible before such a change is made, but in no case less than 24 hours before such a change. Notification may initially be made orally, but shall be followed promptly by written notice.

#### VII. PENALTIES FOR MONCOMPLIANCE

Violation of any provision of this Order may subject Respondent to civil penalties of up to \$27,500 per violation per day, as provided in Section 106(b)(1) of CERCLA, 42 U.S.C. §9606(b)(1). Respondent may also be subject to punitive damages in an amount up to three times the amount of any cost incurred by the United States as a result of such violation, as provided in Section 107(c)(3) of CERCLA, 42 U.S.C. §9607(c)(3). Should Respondent violate this Order or any portion hereof, U.S. EPA may carry out the required actions unilaterally, pursuant to Section 104 of CERCLA, 42 U.S.C. §9604, and/or may seek judicial enforcement of this Order pursuant to Section 106 of CERCLA, 42 U.S.C. §9606.

#### VIII. REIMBURSEMENT OF COSTS

Respondent shall reimburse U.S. EPA, upon written demand, for all response costs incurred by the United States in overseeing Respondent's implementation of the requirements of this Order. U.S. EPA may submit to Respondent on a periodic basis a bill for all response costs incurred by the United States with respect to this Order. U.S. EPA's Itemized Cost Summary, or such other summary as certified by U.S. EPA, shall serve as the basis for payment.

Respondent shall, within 30 days of receipt of the bill, remit a cashier's or certified check for the amount of those costs made payable to the "Hazardous Substance Superfund," to the following address:

U.S. Environmental Protection Agency Program Accounting & Analysis Section P.O. Box 70753 Chicago, Illinois 60673

Respondent shall simultaneously transmit a copy of the check to the Director, Superfund Division, U.S. EPA Region 5, 77 West Jackson Blvd., Chicago, Illinois, 60604-3590. Payments shall be designated as "Response Costs - Vacant Lot Site" and shall reference the payer's name and address, the U.S. EPA site identification number (A527), and the docket number of this Order.

Interest at a rate established by the Department of the Treasury pursuant to 31 U.S.C. §3717 and 4 CFR §102.13 shall begin to accrue on the unpaid balance from the day after the expiration of the 30 day period notwithstanding any dispute or an objection to any portion of the costs.

#### IX. RESERVATION OF RIGHTS

Nothing herein shall limit the power and authority of U.S. EPA or the United States to take, direct, or order all actions necessary prevent, abate, or minimize an actual or threatened release of hazardous substances, pollutants or contaminants, or hazardous or solid waste on, at, or from the Site. Further, nothing herein shall prevent U.S. EPA from seeking legal or equitable relief to enforce the terms of this Order. U.S. EPA also reserves the right to take any other legal or equitable action as it deems appropriate and necessary, or to require the Respondent(s) in the future to perform additional activities pursuant to CERCLA or any other applicable law.

#### X. OTHER CLAIMS

By issuance of this Order, the United States and U.S. EPA assume no liability for injuries or damages to persons or property resulting from any acts or omissions of Respondent. The United States or U.S. EPA shall not be a party or be held out as a party to any contract entered into by the Respondent or its directors, officers, employees, agents, successors, representatives, assigns, contractors, or consultants in carrying out activities pursuant to this Order. Each party shall bear its own costs and attorneys fees in connection with the action resolved by this Order.

This Order does not constitute a pre-authorization of funds under Section 111(a)(2) of CERCLA, 42 U.S.C. §9611(a)(2).

Nothing in this Order constitutes a satisfaction of or release from any claim or cause of action against the Respondent or any person not a party to this Order, for any liability such person may have under CERCLA, other statutes, or the common law, including but not limited to any claims of the United States for costs, damages and interest under Sections 106(a) or 107(a) of CERCLA, 42 U.S.C. §§9606(a), 9607(a).

#### XI. MODIFICATIONS

Modifications to any plan or schedule may be made in writing by the OSC or at the OSC's oral direction. If the OSC makes an oral modification, it will be memorialized in writing within 7 business days; however, the effective date of the modification shall be the date of the OSC's oral direction. The rest of the Order, or any other portion of the Order, may only be modified in writing by signature of the Director, Superfund Division, Region 5.

If Respondent seek permission to deviate from any approved plan or schedule, Respondent's Project Coordinator shall submit a written request to U.S. EPA for approval outlining the proposed modification and its basis.

No informal advice, guidance, suggestion, or comment by U.S. EPA regarding reports, plans, specifications, schedules, or any other writing submitted by the Respondent shall relieve Respondent of its obligations to obtain such formal approval as may be required by this Order, and to comply with all requirements of this Order unless it is formally modified.

#### XII. NOTICE OF COMPLETION

After submission and approval of the EE/CA Report, Respondent may request that U.S. EPA provide a Notice of Completion of the work

required by this Order. If U.S. EPA determines, after U.S. EPA's review of the Final EE/CA Report, that all work has been fully performed in accordance with this Order, except for certain continuing obligations required by this Order (e.g., record retention), U.S. EPA will provide written notice to the Respondent. If U.S. EPA determines that any removal activities have not been completed in accordance with this Order, U.S. EPA will notify the Respondent, provide a list of the deficiencies, and require that Respondent correct such deficiencies. The Respondent shall implement these requirements and shall submit a modified Final EE/CA Report in accordance with the U.S. EPA notice. Failure to correct the identified deficiencies shall be a violation of this Order.

#### KIII. ACCESS TO ADMINISTRATIVE RECORD

The Administrative Record supporting these removal actions is available for review during normal business hours in the U.S. EPA Record Center, Region 5, 77 W. Jackson Blvd., Seventh Floor, Chicago, Illinois. Respondent may contact Thomas Krueger, Assistant Regional Counsel, at (312) 886-0562 to arrange to review the Administrative Record. An index of the Administrative Record is attached to this Order.

#### XIV. OPPORTUNITY TO COMPER

Within 3 business days after issuance of this Order, Respondent may request a conference with U.S. EPA. Any such conference shall be held within 5 business days from the date of the request, unless extended by agreement of the parties. At any conference held pursuant to the request, Respondent may appear in person or be represented by an attorney or other representative.

If a conference is held, Respondent may present any information, arguments or comments regarding this Order. Regardless of whether a conference is held, Respondent may submit any information, arguments or comments (including justifications for any assertions that the Order should be withdrawn against a Respondent), in writing to U.S. EPA within 2 business days following the conference, or within 7 business days of issuance of the Order if no conference is requested. This conference is not an evidentiary hearing, does not constitute a proceeding to challenge this Order, and does not give Respondent a right to seek review of this Order. Requests for a conference shall be directed to Thomas Krueger, Assistant Regional Counsel, at (312) 886-0562. Written submittals shall be directed as specified in Section V.2 of this Order.

#### XV. SEVERABILITY

If a court issues an order that invalidates any provision of this Order or finds that Respondent has sufficient cause not to comply with one or more provisions of this Order, Respondent shall remain bound to comply with all provisions of this Order not invalidated by the court's order.

#### XVI. EFFECTIVE DATE

This Order shall be effective 10 business days following issuance unless a conference is requested as provided herein. If a conference is requested, this Order shall be effective 5 business days after the day of the conference.

IT IS SO ONDERED

William B. Muno, Director

RE:

Final Plan Documents

Fansteel, Inc.

Number One Tantalum Place

North Chicago, Illinois

Dear Mr. O'Grady:

Enclosed are two copies of the plans listed below, prepared for the above-referenced site. Upon approval of these plans, Carlson Environmental, Inc. (CEI) is prepared to mobilize within two weeks to begin the site field activities. CEI notes that, based on the backfilling schedule for the Vacant Lot Site, there may be a delay in installing the six monitoring wells planned on the eastern border of the Vacant Lot Site.

- 1. Site Investigation Work Plan. Version 2.1 dated July 1999 and prepared by CEI. This has been revised to remove the sampling of the portion of Pettibone Creek that is located on the Vacant Lot Site. In addition, the volatile organic compound sampling will be performed using field preservation techniques in accordance with EPA Method 5035 rather than the EnCore samplers, as previously proposed. Lastly, the tables have been revised to be consistent with CEI's QAPP.
- 2. Quality: Assurance Project Plan (QAPP). Version 1.2 dated July 1999, and prepared by CEI. The QAPP has been revised to ensure consistency with the Site Investigation Work Plan. Additionally, Section 7.0 of the QAPP indicates that Sequoia Analytical will be performing the project-required tantalum analysis, rather than Great Lakes Analytical. The relationship between Sequoia Analytical and Great Lakes Analytical is described in Section 7.0 and the letter from Great Lakes Analytical which is included as Appendix D.
- 3. Quality Assurance Program (QAP). Revision 5.7 dated February 18, 1998, and prepared by Great Lakes Analytical. Attached to the QAP are three letters which respond to the EPA comments and a letter from Great Lakes Analytical describing its relationship with Sequoia Analytical, the laboratory that will perform the project-required tantalum analysis. Attached are the most recent versions of Great Lakes Analytical's standard operating procedures (SOPs)

Mr. John J. O'Grady July 23, 1999 Page 2

and Sequoia Analytical's SOPs for the tantalum analysis. The SOPs have been revised to incorporate the EPA comments. The attached SOPs are ordered by method number.

Please feel free to contact me at (312) 704-8843 if you have any questions or comments as you review the enclosed materials.

Respectfully submitted,

CARLSON ENVIRONMENTAL, INC.

Re: Notice of Approval of Site Investigation Work Plan

Fansteel, Inc.: North Chicago, Lake County, Illinois

This letter provides Fansteel, Inc., and their contractor, Carlson Environmental, Inc. (CEI), with the United States Environmental Protection Agency's (U.S. EPA) Notice of Approval of the Site Investigation Work Plan (Work Plan), for the Fansteel, Inc., facility located in North Chicago, Lake County, Illinois.

Approval of Site Investigation Work Plan: Based upon a thorough review by the U.S. EPA of the draft and revised EE/CA Work Plan, the U.S. EPA hereby <u>approves</u> the July 1999, Revised Version 2.1, Site Investigation Work Plan with the following modifications.

U.S. EPA Comments Incorporated By Reference into Work Plan: Fansteel and CEI shall incorporate all of the comments and concerns of the U.S. EPA into the Work Plan.

Quality Assurance Project Plan (QAPP) Approval: This authorization is contingent upon the Fansteel and CEI's incorporation, in the implementation of the Work Plan, of the attached comments from Mr. Richard Byvik, Chemist with the U.S. EPA Region 5 Superfund Division Technical Support Section. Failure to incorporate any of the modifications cited in this letter or in the forthcoming final QAPP to be submitted, shall not affect the project schedule or the accomplishment of the project milestones.

Sequence of Events, Letters, Submittals, Etc. Incorporated by Reference: This letter references the following sequence of events, letters, submittals, etc., relative to the Work Plan submittals and review and comment letters by the U.S. EPA:

- 1. June 17, 1997. General Notice of Potential Liability Letter.
- August 25, 1997, Meeting at the U.S. EPA Region 5 Office regarding the June 17, 1997, General Notice of Potential Liability Letter.
- 3. November 4, 1997, Letter to Mr. Clifton A. Lake, Esq., of McBride, Baker and Coles, following up on the August 25, 1997, meeting at the U.S. EPA Region 5 Office.

Recycled Recyclable :

February 25, 20000 1, 27, 655 Ms. Margaret Kar. Av. Re. Fansteel, Inc., Sue Investigation Work Plan.

- 17 March 16, 1999, transmittal from Ms. Karolyl to-dohn O'Grady, transmitting CFTs revised QAPP and supplement to Laboratory QAPP prepared by Great Lakes Analytical.
- 18. May 6, 1999, Letter to Mr. Lake regarding the QAPP.
- 19. June 28, 1999, facsimile to Ms. Karolyi, regarding U.S. EPA's comments on the QAPP, with a copy to Mr. Mark J. Steger, Esq., McBride, Baker & Coles, Inc.
- 20. July 23, 1999, Letter to John O'Grady from Ms. Karolyi transmitting Work Plan (Revised Version 2.1), CEI's QAPP (Version 1.2) dated July 1999, and Great Lakes Analytical's QAPP (revision 5.7), dated February 18, 1998.
- 21. February 23, 2000, Meeting at the U.S. EPA Region 5 Office with Mr. Michael J. Mocniak, VP, General Counsel and Secretary of Fansteel, Mr. Mark J. Steger of McBride, Baker & Coles, Ms. Margaret M. Karolyi and Mr. Edward E. Garske of CEI. Messrs. Krueger and O'Grady represented the U.S. EPA Region 5 Superfund Division.

#### **Submittal of Final Report:**

Please note that the submittal of the final Report must be submitted no later than 48 weeks from the date of this letter or no later than Friday, January 26, 2001. The draft Report should be submitted to the U.S. EPA Region 5 no later than Friday, November 3, 2000, in order to provide adequate time for the U.S. EPA's review of the draft submittal, incorporation of comments, and re-submittal of the final Report.

If you have any questions, please contact me at (312) 886-1477.

Sincerely.

l⁄6hn J. O`Grady,

Remedial Project Manager

Superfund Division

Comments on the second revision Quality Assurance Project Plan (QAPP) that was not addressed

#### E. GLA 6010 BG SOP ANALYSIS OF METALS USING ICP

- 1) Section 8.1
  Before any samples are analyzed. Tantalum must be included in the method validation performed.
- 2) Section 10.0, Table 1, and APPENDIX A Include Ta in the calibration standards.
- 3) APPENDIX B
  For element Ta indicate the <u>Wavelength</u>, <u>IDL</u>, and any <u>Interferant(s)</u>.

#### COMMENT:

Great Lakes Analytical provided a copy of Sequoia Analytical's ICP SOP that will be used for Tantalum analysis. The first page indicates that Germanium and Tantalum have been added to the analyte list. Tantalum is not included in TABLE 1, and not included in the preparation of the calibration standards, Sections 5.3 and 5.4, or anywhere in the Sequoia Method No.: EPA 6010A.

The <u>EPA Method 1620</u> indicates that Tantalum can be determined using Semiquantitative Screening by ICP. Semiquantitative screening requires a sequential ICP instrument. Tantalum is analyzed at a wavelength of <u>226.230 nm</u> with a detection limit of <u>0.5 mg/L</u>. Tantalum working standard is prepared at <u>1.0 mg/L</u>. The matrix spike is prepared at the midpoint of the calibration curve. Sequoia must be able to establish acceptable precision and accuracy of this method for the analysis of Tantalum. Sequoia should discuss how Tantalum will be analyzed.

The sampling results from the Site Investigation will be compared to the action levels detailed in this Work Plan. If contaminant concentrations are detected above these action levels, Fansteel may propose alternative site-specific remediation objectives using a risk-based type of analysis (i.e. a Tier 2 or Tier 3 analysis). If soil contamination or a ground water contaminant plume that appears to be impacting the Vacant Lot Site and/or Pettibone Creek is detected above these site-specific remediation objectives, an additional investigation will be performed to delineate the extent of the contaminant and to investigate possible off-site sources of contamination. The results of the investigation(s) will be detailed in a Site Investigation Report.

Upon completion of the proposed investigation(s) and evaluation of the results, Fansteel will identify potential off-site sources of contamination and define the extent of contaminant plumes that may be impacting the Vacant Lot Site. If the investigation results indicate that contamination at the Fansteel North Chicago facility is significantly impacting the adjacent Vacant Lot Site and remediation at the Fansteel North Chicago facility is appropriate, Fansteel will research viable remediation alternatives and prepare an Engineering Evaluation and Cost Assessment (EE/CA) Report, if necessary.

Site Investigation Work Plan (Revised Version 2.1)
Fansteel, Inc. - North Chicago, Illinois

sampling at the Vacant Lot Site, a feasibility type analysis of potential remediation alternatives, and a cost analysis for various remediation strategies.

It is alleged in the EE/CA that historically, the Vacant Lot Site has been used for waste disposal by industrial properties in the vicinity of the Vacant Lot Site. Additionally, the EPA believes that potential contamination at the Fansteel North Chicago facility may have impacted the ground water at the Vacant Lot Site. Outfalls from the Fansteel North Chicago facility discharge to Pettibone Creek. The EPA also believes that historic discharges from these outfalls may have impacted the creek sediments.

In the letter to The Fansteel Corporation dated June 17, 1997, the EPA has requested that Fansteel conduct an investigation of the Fansteel North Chicago facility to identify any potential contaminant plume which may be contributing to the contamination detected at the Vacant Lot Site, and to collect additional samples from Pettibone Creek. This Site Investigation Work Plan has been prepared by CEI on behalf of Fansteel in order to detail the proposed soil, ground water and sediment sampling that will be conducted on behalf of Fansteel. This Site Investigation Work Plan is being submitted for EPA review and approval. Upon receiving approval of this work plan, Fansteel plans to proceed with the Site Investigation according to the project schedule included in Section 6.3.

1.2 Purpose of the Site Investigation - The activities detailed in the Site Investigation Work Plan are intended to comply with the request from the EPA to conduct an investigation, as outlined in a letter to The Fansteel Corporation dated June 17, 1997.

As outlined in the EPA's letter, the proposed Site Investigation is to accomplish the following two goals:

Identify the nature and extent of potential contamination on the Fansteel facility, including any potential contamination that may be contributing to the ground water

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

#### 2.0 GENERAL SITE INFORMATION

2.1 Site Description - The Fansteel North Chicago facility is located at Number One Tantalum Place, approximately two miles east of the intersection of Martin Luther King Jr. Street and U.S. Highway 41, in North Chicago, Lake County, Illinois (refer to Figure One in Attachment A). The site is bounded by the North Chicago Refiners and Smelters facility to the east, Martin Luther King Jr. Street and the Federal Chicago plant to the south, the Vacant Lot Site to the west, and the Elgin, Joliet & Eastern (EJ&E) Railroad to the north.

The site consists of an older plant complex located on an approximately eight-acre parcel. There are two brick buildings on the site; the boiler house and the main production building which is comprised of multi-story and multi-use inner buildings. In addition, a transite building and a few aluminum buildings are present on the site. Total gross floor space is reportedly 325,500 square feet.

The portions of the property not covered by buildings are generally asphalt-or concrete-paved and are used as parking lot areas or access ways. Two large, empty upright above-ground tanks are located at the northern end of the property. A railroad spur is located just inside the eastern edge of the site, and an elevated railroad siding is located just south of the above-ground tanks. The entire site is enclosed by security fencing, and there is some vegetation, consisting of grass and bushes, between the office area and Martin Luther King Jr. Street.

The site topography is essentially flat, although on the east side, the site is elevated near the fence line, sloping down into the parking lot. The building is elevated compared to the parking lot, and the railroad spur on the east side is several feet below the site grade. The railroad property north of the site slopes steeply downwards toward the site.

The site configuration is depicted in Figure Two in Attachment A.

195- 14 60601 - Phone /3121 346-2140 - Fax (3121 345-6956

Site Investigation Work Plan (Revised Version 2.1)

Fansteel, Inc. - North Chicago, Illinois

According to information provided by representatives of Fansteel, in 1942, the federal government purchased a portion of the VLS property, authorized and financed through its Defense Plant Corporation, the construction of Fansteel's North Chicago facility. A Fansteel subsidiary, the Tantalum Defense Corporation, was formed and leased to the site from the federal government to supply the government with various materials needed during World War II. The facility was subsequently sold by the federal government to Fansteel in 1947. The Fansteel Metals Division and Fansteel VR/Wesson Foundry Division previously operated with site. The main facility operations included the production of specialty metals and related publishes, in addition to foundry operations. Production activities at the North Chicago facility ceased in 1990.

- 2.4 Current Site Operations The site is currently used by Fansteel as office space for its corporate headquarters. Production related activities ceased at the North Chicago facility in 1990. The former plant buildings are primarily vacant and are routinely maintained, as necessary.
- 2.5 Pettibone Creek As discussed in the EE/CA prepared for the Vacant Lot Site by E&E:

"The [Vacant Lot] site is transected by the Pettibone Creek (Creek), an intermittent water body that lies in a relatively steep-sided ravine, and originates at the northwest boundary of the [Vacant Lot] site. The ravine is lined with large weeds, bushes, and deciduous trees. The Creek flows through the [Vacant Lot] site from north to south, and then flows east into Lake Michigan (1.5 miles from the site). The Creek, at its origin receives water through the North Chicago stormwater discharge and a ditch. The Creek is also fed by rainwater and outfalls from two nearby industries/facilities, EMCO Chemical Distributing, Inc. (EMCO), and Fansteel, Inc. (Fansteel)."

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

4

#### 3.0 FOCUS OF SITE INVESTIGATION

- 3.1 Soil -During the proposed Site Investigation, a total of 33 soil borings will be emplaced at locations across the Fansteel North Chicago facility to a depth of approximately 20 ft bgs. The borings will be continuously sampled at two-foot intervals. Each sample will be placed in appropriate laboratory sample containers and retained by CEI, for possible laboratory analysis.
- 3.2 Ground Water -A total of nine ground water monitoring wells will be installed at the site and screened from approximately 10 to 20 ft bgs.

TO THE SECTION OF THE

- 3.3 Pettibone Creek Sediment -Sediment samples from two sample depths (0 to 6 inches and 6 to 12 inches) will be collected from three locations in Pettibone Creek, downstream from the Vacant Lot Site. As discussed in Section 1.2, the creek sediments have been excavated from the Vacant Lot Site.
- 3.4 Ditch Sediment CEI will collect sediment samples from a drainage ditch that is located north of and drains into Pettibone Creek. This drainage ditch appears to receive surface runoff from an adjacent transformer bank where staining is present.

#### 3.5 Compounds of Concern in Soil and Ground Water

3.5.1 VOCs - Elevated concentrations of volatile organic compounds (VOCs) were detected in the soil (0-9 feet) and ground water at the Vacant Lot Site. Additionally, TCE contamination has been identified on the Fansteel property during the RCRA Closure investigations. Fansteel has been asked to investigate the soil and ground water at the North Chicago facility to determine if there is a VOC soil and/or ground water plume that may be migrating on to the Vacant Lot Site. Therefore, soil and ground water sampling will include VOCs analysis.

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

- 3.6.2 PNAs -Elevated concentrations of PNAs have been detected in the Pettibone Creek sediment at the Vacant Lot Site. Therefore, the sediment samples will be analyzed for PNAs.
- 3.6.3 PCBs PCBs were detected in the sediment samples collected from the portion of Pettibone Creek on the Vacant Lot Site. The sediment sampling analysis will include PCBs.
- <u>3.6.4 Pesticides</u> The EPA has requested that the Creek sediment sampling include pesticides. Therefore, the Creek sediment samples will be analyzed for pesticides. However, the ditch sediment samples will not be analyzed for pesticides.

on the waster of the day of

Site Investigation Work Plan (Revised Version 2.1)
Fansteel, Inc. - North Chicago, Illinois

with a random point of origin produced 33 sampling locations. CEI then made the adjustments listed below.

The will be war to the Konort desperse to

- One boring was eliminated due to its proximity to a 300,000 gallon underground reservoir located beneath the "Sintering Building."
- Since there is limited ascertand a subsurface water line and other buried utilities along many and the subsurface water line and other buried utilities along many and the subsurface water line and other buried utilities along many and the subsurface water line and other buried utilities along the subsurface water line and other line and subsurface water line and other line
- Several other sampling locations were moved to avoid drilling through building
- Two additional borings were added in the vicinity (to the south and to the west) of the former HWMU in order to collect samples in the areas previously shown to have been impacted by elevated TCE, Pb and Cd concentrations.
  - One of the southern wells along the western property line was eliminated and the well spacing of the remaining south wells along the western property line were adjusted.
    - The three northerningst wells along the western property line were shifted further north to place these wells at logations that, based on the assumed ground water flow direction, would be down gradient from the previously detected TCE plume in the vicinity of the former HWML.
- 4.2.2 Ground Water Nine of the soil borings will be converted to ground water monitoring wells. The six boring locations located along the west property line of the subject site will be converted to ground water monitoring wells (five wells to evaluate the potential migration to the west and one well to evaluate the potential migration to the southwest). In

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

1

Two sediment samples will be collected from the drainage ditch at the location indicated on Figure Three at depths of 0 to 6 inches and 6 to 12 inches below the drainage ditch bottom. If staining is evident near the transformers located north of the site, additional samples of the stained soils may be collected.

4.3 Sampling Methodology - All samples will be collected and placed in clean glass jars, vials or bottles with Teflon<sup>3</sup>-lined lids or septa supplied by the laboratory. The samples will be maintained at a temperature of approximately 4° C in an insulated container. Upon completion of the site sampling, selected samples will be shipped to an accredited environmental analytical laboratory for analysis. The samples will be maintained under standard chain-of-custody procedures. Table One in Attachment B provides a summary of the number of samples to be collected, appropriate sample containers and field parameters to be recorded during the field sampling.

4.3.1 Soil - Thirty-three soil borings will be emplaced at the subject site based on the sampling strategy described above. The borings will be emplaced and sampled using a Geoprobe<sup>®</sup> Macro Core Soil Sampling System. These soil borings will be advanced using a truck-mounted Geoprobe<sup>®</sup> Model 6600 and GH-60 hammer. If any of the sampling locations are inaccessible using a truck, a Geoprobe<sup>®</sup> Model 5400 mounted to a Case<sup>®</sup> 1840 Bobcat <sup>®</sup> may need to be employed to complete the soil borings.

Thirty-three soil borings will be advanced to a depth of approximately 20 feet below ground surface (ft bgs). Soil samples will be collected from each boring using a 48-inch stainless steel sampling tube lined with cellulose acetate butyrate (CAB) sampling sleeves. The borings will be continuously sampled and the soil retrieved from the four-foot Geoprobe interval will generally be divided into two samples, each corresponding to a two-foot sample interval. In all soil borings not emplaced through building foundations (25 proposed borings), a soil sample will be collected from 0-12 inches to evaluate the "surface soil" conditions.

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

Ta, SPLP Pb or pH. If the preserved sample for VOCs exhibits evidence of effervescence, a third, unpreserved, 2-ounce (or 4-ounce) sample jar should be collected and submitted for VOCs analysis. In this instance, the sample jar should be filled as full as practical in order to minimize headspace.

The samples submitted for laboratory analysis will be selected on the basis of lithology and visual observations (i.e. staining), PID or FID screening, and sample depth. For VOCs, the sample interval exhibiting the highest PID or FID reading generally will be submitted for laboratory analysis. Any sample submitted for VOC analysis will also be submitted for percent moisture analysis. Staining, visual appearance and lithology (i.e., slag and fill material) will primarily be used to select the sample from each boring that will be submitted for laboratory analysis of Pb, Cd, Ta, SPLP Pb and pH. Samples from additional intervals may be analyzed for VOCs and/or metals as necessary to define the extent of soil contamination.

As discussed in Section 5.2, Fansteel may propose site-specific remediation objectives. In order to aid the calculation of site-specific remediation objectives, at least five samples will be collected for total organic carbon (TOC) content.

4.3.2 Ground Water - Nine ground water monitoring wells will be installed to a depth of approximately 20 ft bgs. These wells will be installed using a truck-mounted Geoprobe<sup>®</sup> Model 6600 and GH-60 hammer to drive 3.5-inch diameter well rods into previously completed boreholes. Each well will be constructed using stainless steel well screens and risers. Well screening and casing materials will be steam-cleaned prior to installation. Quartz sand will be placed around the screen to an elevation of 1 foot above the screen. A bentonite seal will be placed above the quartz sand to provide an impermeable seal in the borehole. In order to secure the wells, a stick-up or flush-mounted steel well box will be cemented in place over each well. A sample monitoring well construction diagram is included as Figure Five in Attachment A.

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

4.3.3 Sediment - At each proposed sediment sample location, the sediment samples will be collected using a sediment sampler equipped with a plunger. The sediment samples collected for VOCs analysis will be field preserved using EPA Method 5035. Three samples containers (two low level and one high level) will be collected for VOCs analysis, as described in Section 4.3.1. If the field preserved sample exhibits evidence of effervescence, an unpreserved VOC sample should be placed in a 2-ounce or 4-ounce jar, filling the jar as full as practical to minimize headspace.

rionalis assessment of the Art of the state

In addition to the VOC samples, five 4-ounce jars will be collected for each sediment sample (refer to Table One in Attachment B). The sediment sample will be retrigued from two sample depths, 0 to 6 inches and 6 to 12 inches below the creek, bank or disch bottom.

All sampling equipment will be cleaned with an alconox solution and rinsed with distilled water prior to use at each well. The individual collecting the samples will wear new vinyl gloves during the collection of each sample.

are the confine management of the additional form

- 4.4 Decontamination Procedures. In order to preserve the accuracy of the sample results from the Site Investigation, CEL will employ the decontamination procedures for the sampling equipment listed below. These procedures are designed to prevent cross-contamination between samples collected during the Site Investigation. Additional decontamination procedures related to personnel and personnel protective equipment (PPE) are discussed in the Health and Safety Plan (HASP) developed for the Site Investigation (refer to-Section 8.0).
  - A temporary decontamination area will be constructed and used during the Site Investigation field activities. All steam-cleaning activities will be conducted within this decontamination area. The decontamination area will be constructed to provide containment of any water generated during the steam-cleaning activities.

0.1

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

- All decontamination water generated from the steam-cleaning activities will be containerized and transferred to 55-gallon steel drums at the end of each work day.
- Any PPE that requires disposal (i.e. sampling gloves, tyvek, filter cartridges, etc.) will be placed in 55-gallon steel drums.
- Any used or broken sample containers or sampling materials will be placed in 55-gallon steel drums.

All drums will be labeled and staged at the site in areas designated by Fansteel representatives. CEI will mark the contents and applicable dates on each 55-gallon drum using a grease marker or paint. Upon completion of the Site Investigation, and a review of the analytical laboratory results, CEI will assist Fansteel in arranging for the proper disposal of the drums in accordance with applicable rules and regulations.

4.6 Analytical Parameters - All soil, ground water and sediment samples will be analyzed using the U.S. Environmental Protection Agency's (EPA) Test Methods of Evaluating Solid Wastes, Third Edition, (SW-486). The analytical methods and preservation requirements are listed on Table One in Attachment B.

The laboratory procedures, quality assurance and quality control measures associated with the analytical methods are detailed in the Great Lakes Analytical Quality Assurance Program (refer to Section 7.0).

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

The metals and cyanide action levels for soil/sediment and ground water are included in Tables Three and Seven, respectively.

5.1.3 PNAs - The most stringent of the TACO Tier 1 remediation objectives for industrial/commercial properties with Class I ground water will be applied as the action levels for PNAs. The action levels for PNAs in the sediment are listed in Table Four.

for industrial/commercial properties with Class I ground water will be applied as the action levels for PCBs and pesticides. The action levels for PCBs and pesticides in the sediment are listed in Table Five.

5.2 Site-Specific Remediation Objectives - Upon a review of the analytical results from the proposed Site Investigation, CEI will conduct Tier 1, Tier 2 and/or Tier 3 analyses to determine site-specific remediation objectives. Fansteel will conduct additional investigations as necessary, to determine the extent of contamination for contaminants potentially affecting the Vacant Lot Site, with respect to these site-specific remediation objectives.

Fansteel may also contact the IEPA Office of Chemical Safety (OCS) to gather information and guidance for establishing remediation objectives for compounds for which a TACO Tier 1 remediation objective has not been established (i.e., tantalum). The process for establishing remediation objectives will also consider human health and ecological risk-based assessments.

The tiered analyses, development of the site-specific remediation objectives and associated extent of contamination investigation will be included in the Site Investigation Report.

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

j

If, during the course of the Site Investigation and associated extent of contamination delineations, it is determined that contamination at the Fansteel North Chicago facility has impacted the adjacent Vacant Lot Site and remediation at the Fansteel North Chicago facility is appropriate, Fansteel will research viable remediation alternatives and may prepare an Engineering Evaluation and Cost Assessment (EE/CA) Report.

6.2 Technical Approach - The overall strategy for conducting the Site Investigation is based on a site-wide soil sampling with perimeter ground water monitoring. The Site Investigation activities will include emplacing 33 borings across the site to a depth of approximately 20 ft bgs. Selected samples from each boring will be submitted for analysis of VOCs, PNAs, Pb, Cd, Ta, pH and SPLP Pb. The proposed boring locations are shown in Figure Two in Attachment A.

Nine of the borings will be converted to ground water monitoring wells, each screened from approximately 10 to 20 ft bgs. The ground water monitoring wells will be developed and sampled for VOCs, Pb, Cd and Ta. Measurements of the static water level and from a topographic survey of the monitoring well elevations will be used to calculate the approximate ground water flow direction for the site. The proposed monitoring well locations are shown in Figure Two in Attachment A.

In order to assess the potential contribution of the Fansteel North Chicago facility's outfall discharges to Pettibone Creek, Fansteel proposes collecting sediment samples from Pettibone Creek at three Creek locations. Samples will be collected from two depths at each location, 0 to 6 inches and 6 to 12 inches below the creek bottom. These six samples (two depths from three creek locations) will be analyzed for TAL metals, Ta, CN, pH, SPLP Pb, PNAs, PCBs and pesticides (refer to Table One, Attachment B). The outfall locations are shown in Figure Three in Attachment A.

The EJ&E railroad tracks run along the north border of the Vacant Lot Site and the Fansteel North Chicago facility. Immediately north of these tracks is a drainage ditch which appears

#### CARLSON ENVIRONMENTAL, INC.

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

Edward Garske, Project Director, will have final responsibility and authority for all work performed. Mr. Garske will assure the resources required to successfully complete the project are committed.

The Project Manager, Margaret Karolyi, is the key manager of project activities and is responsible for:

- Managing project operations and activities.
- Conducting technical review of each task being performed.
- Maintaining clear and effective communication with Fansteel's Project Manager.
- Working with Fansteel in project scoping and planning.
- Ensuring appropriate technical resources are utilized for each task.
- Ensuring field activities are conducted in accordance with program Health and Safety and QA/QC requirements.
- Ensuring proper technical consultation is provided.
- Maintaining overall project technical continuity.
- Controlling costs and schedule aspects of all project activities.

The Project Engineer, Kenneth James, will be responsible for maintaining the quality of all engineering activities associated with the project in addition to establishing detailed task specifications including schedules and estimates of labor and material costs.

Site Investigation Work Plan (Revised Version 2.1) Fansteel, Inc. - North Chicago, Illinois

#### 7.0 QUALITY ASSURANCE PROJECT PLAN

CEI prepared a Quality Assurance Project Plan (QAPP) for the Site Investigation at the Fansteel North Chicago facility. The QAPP presents the organization, policies, QA/QC procedures, objectives and activities that will be utilized to ensure the data provided as a result of the Site Investigation at the facility are representative of site conditions.

SOPs for field procedures, sample handling and storage, chain-of-custody, and laboratory and field analyses are described in the QAPP. The QA/QC procedures are structured in accordance with applicable technical standards, US EPA's requirements, regulations and guidance. This QAPP was prepared largely in accordance with a guidance manual entitled "Region 5 Model Quality Assurance Project Plan," Revision 1, May 1996. CEI's QAPP has been submitted under separate cover for EPA review and approval.

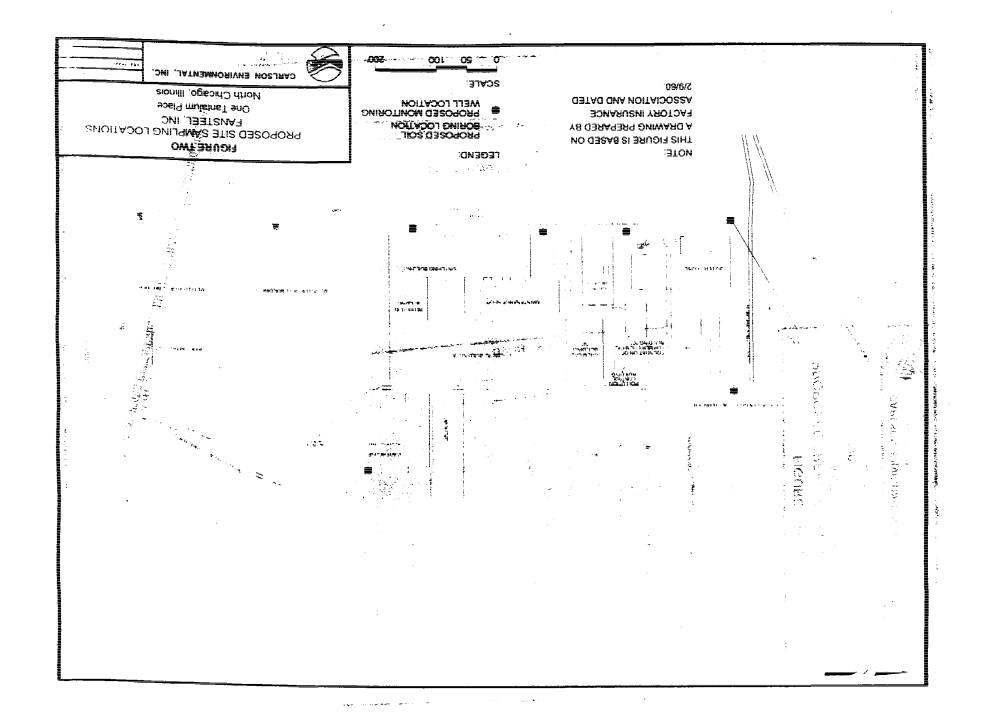

Additionally, Great Lakes Analytical has provided a Quality Assurance Program that outlines the laboratory protocols and EPA Methods used for analyses, in addition to the QA/QC procedures employed by the laboratory. The Great Lakes Analytical Quality Assurance Program has been submitted for EPA review and approval, under separate cover.

Services & Experience

Corporate Overview

#### integrated services

CEI's ability to integrate our services allows us to address virtually any environmental problem facing a client. From simple site assessments to complex soil and ground water remediation systems, CEI provides total project management/"one stop shopping" for all projects in each of our service areas.

#### client partnerships

Long term client relationships form the foundation of CEI's corporate philosophy. CEI believes in building true partnerships with clients in order to more effectively manage the environmental challenges facing companies today. With a specialized knowledge of the environmental and regulatory community, CEI works to create and implement economical solutions that bring our clients a step closer to achieving their business goals.

#### regulatory relationships

The ability to work effectively with state and Federal regulatory agencies is crucial to the development of successful compliance programs. CEI's experience with the related bureaucracies and their rules and regulations is extensive and well-rounded. CEI acts as a liaison between clients and the pertinent agencies, allowing us to tailor solutions that are advantageous to all parties.

#### "ARLSON ENVIRONMENTAL, INC.

about our founder...

Dr. Richard J. Carlson, President and Founder of CEI, oversees all aspects of the firm's engineering and consulting practice. With over twenty years of executive experience in government and the consulting industry, Dr. Carlson has developed a unique ability to create cost effective solutions to the problems of corporate environmental compliance.

Prior to founding CEI, Dr. Carlson served as the Director of the Illinois Environmental Protection Agency from 1981 to 1988. As the State's top environmental regulator, Dr. Carlson guided the IEPA through the development of the Illinois Superfund program, passage of the Illinois Ground Water Protection and Solid Waste Management Acts, and the implementation of the Resource Conservation and Recovery Act.

Through participation in the National Governor's
Association and various committees of the United States
Environmental Protection Agency (USEPA), Dr. Carlson has
developed a broad knowledge of regulatory agency
activities throughout the country. Prior to his position as
IEPA Director, Dr. Carlson served as Special Assistant to
Governor James R. Thompson for Environmental and
Natural Resources.

#### "ARLSON ENVIRONMENTAL, INC.

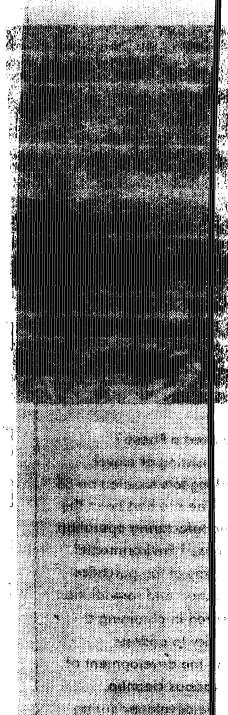

#### environmental assessments

Parties involved in real estate transactions and business mergers or acquisitions should carefully evaluate property and facility conditions to determine if the property has been about artificiated with hazardous substances and may require cleanup under Federal or State law. If environmental properties of the property. For real estate loans, lending little value of the property. For real estate loans, lending little commercial and industrial properties prior to financing in all the railing of the collateral.

past or present activities may have resulted in soil or ground water contamination, or if other environmental issues exist at the site such as asbestos or wetlands.

CEI also conducts Phase II field testing, such as soil sampling and ground water monitoring, to determine the nature and extent of contamination and to estimate cleanup costs.

If site remediation is required, CEI will design and implement cleanup programs.

Multi-Site Assessment

As part of the due diligence required prior to forming one of the nation's largest real estate investment trusts. CEI performed Phase I Environmental Assessments on 32 industrial properties in the Chicago metropolitan area and Northern Indiana. CEI worked closely with the client and their attorneys to ensure that the environmental condition of each property was accurately represented to prospective shareholders.

Multiple Site Assessments, Chicago and Northern Indiana

Since that time, CEI has conducted over 50 Phase I/Phase II site investigations for properties as they are added to the Client's portfolio.

Section 3

Soil and Ground Water Investigations

in the first of the contract o

Since 1988, CEI has provided technical support for an ongoing program of dredging in Lake Calumet. This has included periodic sampling of the lake bed to support a State water quality certification under the Army Corps of Engineers permitting program. The sampling program typically includes sampling of the sediment layer and the underlying clay matrix and analyses for chemical and geotechnical parameters.

Lake Calumet - Chicago, Illinois

To conduct this type of sampling, CEI staff fabricated a unique hollow core trand sampling sediment device. Sampling work plans receive prior approval by IEPA and USEPA. Virtually all of the clay material dredged from Lake Calumet has been benefically roused for landfill capping and related environmental construction in the area. Approximately 500,000 cubic yards have been used to cap an abandoned municipal landfill at the north end of Lake Calumet, which was subsequently developed into the Harborside International Golf Complex.

#### underground storage tanks

Federal and State regulations impose strict upgrading requirements on existing tank systems as well as design and operating standards for new tanks. Moreover, tanks ria langer in use or leaking generally must be removed from the ground or abandoned in place. Contaminated with the ground water must be cleaned up to acceptable par levels.

- GEL conducts site investigations to determine if leaks three accurred; designs remediation programs for contaminated soil and/or ground water; oversees tank removals; and prepares State reimbursement applications.
- CEI also assists clients in obtaining "closure"
  letters from State regulatory agencies certifying
  that no additional cleanup is required at a site.
  This typically allows buyers and lenders to close
  transactions knowing that there is no substantial
  threat of further cleanup demands by the
  government.

UST Investigations at 25 Sites Skokie, Prospect Heights and Wheeling , Illinois February 1996

At the request of the Client, CEI conducted regulatory database reviews and site inspections at 25 commercial property locations to determine if USTs were present, or if other site activities could result in waste or product releases to the environment. Initial site inspections were followed by soil sampling at selected sites to evaluate the nature and extent of suspected contamination.

Soil Vapor Extraction/Ground Water Pump and Treat

Degreasing operations and drum storage of waste solvents over a period of years resulted in releases of chlorinated solvents into soil and ground water at this four-acre industrial site occupied by a 33,000 square foot building. A pilot test conducted by CEI in 1995 demonstrated that soil venting, in conjunction with ground water pumping and treatment methods will effectively remove solvents in the soil antiground water at the site. A work plan for implementing a full scale system was submitted to, and approved by the IEPA.

Air Pollution Modeling for Contingency Planning Chicago, Illinois 1994 to 1995

The Client operates an industrial waste treatment, storage and handling facility. The facility's RCRA permit requires documentation of emergency response procedures, including the computer modeling of potential air pollution hazards that may result from a release, fire or explosion. CEI was retained to conduct the modeling utilized in evaluating the effects of these "worst case" scenarios.

CEI used this model to develop an assessment of the possible hazards that may result from a release, fire, or explosion. This required an estimation of the quantities and types of gases that could be generated. The modeling also assessed the effects of wind speed, atmospheric stability class, and atmospheric temperature on ambient air quality levels.

## ARLSON ENVIRONMENTAL, INC.

#### Richard I. Carlson

#### President

- Represents clients in negotiating permits, compliance orders and consent decrees with Federal and State regulatory agencies.
- Manages environmental compliance audits and assists with the development of compliance management systems.
- Manages environmental assessments of a wide variety of commercial and industrial facilities for real estate transactions, mergers, and acquisitions.
- Provides expert testimony in support of various environmental litigation matters on behalf of clients.

#### education

. Attigration in the state of the

nalikking er er 204

Paristration of the second

Doctor of Philosophy, Public Administration, University of Illinois Master of Science, Communications, University of Illinois Bachelor of Science, Communications, University of Illinois

#### selected professional activities

- Co-chair, Environmental Control Committee, Chicagoland Chamber of Commerce, 1988-1993.
- Staff Chair, Task Force on Global Climate Change, National Governors' Association, 1989-1990.
- Director, Illinois Asbestos Abatement Authority, 1988.
- Commissioner, Ohio River Valley Water Sanitation Commission, 1981-1988.
- Member, Water Quality Board, International Joint Commission, 1985-1988.
- Chair, Great Lakes Environmental Administrators, 1987-1988.

### Kenneth W. James

## Director of Engineering

Oversees all engineering operations, including underground storage tank investigations, removals, and remediation measures.

## Project Manager/Engineer

- Manages underground storage tank investigations, tank removals and remediation of petroleum contaminated soils and ground water.
- Manages leaking underground storage tank (LUST) Site

  Classifications and prepares associated Illinois Environmental

  Protection Agency (IEPA) documentation.
- Designs and implements soil sampling and ground water monitoring programs.
- Manages the preparation of documentation required by the IEPA for the reimbursement of funds spent to remediate LUST sites.
- Provides professional engineering oversight for TSCA decontamination activities, RCRA Remedial Facility Investigations and RCRA closures.
- Prepares operating permits for the Clean Air Act Permit Program.

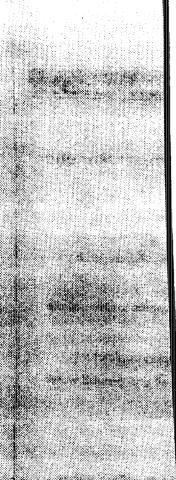

### education

Master of Business Administration, The University of Chicago Bachelor of Science, Chemical Engineering, Illinois Institute of Technology

## registrations / certifications

Registered Professional Engineer, Illinois, Indiana, Ohio and Wisconsin 40-Hour OSHA 29CFR1910.120 HAZWOPER

Asbestos Contractor Supervisor (OSHA Competent Person) & IDPH Licensed CPR and First Aid Training

In Program A F

### Margaret M. Karolyi

## Manager of Field Investigations/Project Manager

Designs and supervises soil and ground water investigations.

. ALMA IN M

- Manages projects for sites participating in State or Federal programs including RCRA, leaking underground storage tanks (LUSTs) and voluntary cleanups.
- Conductoriskihased analyses ig determine remediation strategies

  or unfand develop site-spacific depays objections (e.g. TACC) and RECA).
  - Provides technical assistance to the design and implementation of remediation systems and corrective action activities.
- Propage permit applications for waste water and storm water discharges and air pollution control applications.

### education

Master of Science, Environmental Engineering, Illinois Institute of Technology Bachelor of Science, Chemical Engineering, Michigan State University
